BUK9608-55

### **GENERAL DESCRIPTION**

N-channel enhancement mode logic level field-effect power transistor in a plastic envelope suitable for surface mounting Using 'trench' technology the device features very low on-state resistance and has integral zener diodes giving ESD protection up to 2kV. It is intended for use in automotive and general purpose switching applications.

### **MECHANICAL DATA**

### **MOUNTING INSTRUCTIONS**

### **Notes**

- 1. Observe the general handling precautions for electrostatic-discharge sensitive devices (ESDs) to prevent damage to MOS gate oxide.
- 2. Epoxy meets UL94 V0 at 1/8".

#### **DEFINITIONS**

Data sheet status				
Objective specification	This data sheet contains target or goal specifications for product development.			
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.			
Product specification	This data sheet contains final product specifications.			
Limiting values				

Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### **Application information**

Where application information is given, it is advisory and does not form part of the specification.
